

UC2. Password recovery

General description

The user can reset the password if it was forgotten.

The email verification must be completed to change the password with the goal to prevent the password attacks.

Business logic

1. The user can initiate the password restore procedure by pressing "Forgot your password?" link on the Login page.
2. The user must be redirected to the Password restore screen where the form must ask to enter the email.
 - a. The user must enter valid email, otherwise the error message must be shown.
 - b. If users with entered email is missing in the system the following error message must be shown "The email address could not be found."
3. The user must receive an email with the verification code after entering the valid email.
 - a. The verification code must consist of 6 numeric symbols.
 - b. The verification code must be active for 24 hours only.
 - c. The user must be able to resend the verification code.
4. In case incorrect verification code was entered following message must be shown to the user: "You entered the wrong code or the code expired. Please try again or request a new code."
5. The user must be redirected to the entering password page, after the correct verification code was entered.
6. After the user enters a new password it should be able to use it for the login to the system.
